

Core Lab Hematology Updates/Workarounds 1

KAISER PERMANENTE®

1) Workflow for Platelet Clumps Review

- 1) Delete the platelet count in WAM.
- 2) Then double click on the PLT **Result** area, a POP screen will appear, choose **DNR** this will be reported as **CLUMPING SEEN**. Click **SAVE**, do not put anything on the **Free Text** box.
- 3) Then double click on the **Comment** section, **ADD** a comment on the **Free Text** box:

“Plt estimate appears decreased/adequate/increased (whatever applies). Suggest Citrated Plt Count order.”

- 4) Do platelet count on citrate (if there's an order).

NOTE: Presence of small occasional clumping is fine.

*working on having a canned comment available in WAM for the PLT.

Final Step:

Once the results crossover to Cerner, remember to check and **VERIFY** the PLT result. It will not AUTOVERIFY.

Once verified, then you're **DONE** 😊

2) WAM OP Alert Review

The WAM OP alert tells the CLS what **RULES** were triggered by the results and which run. Then it guides the CLS on what to do to resolve the issue.

By default, you see the OP alert on the upper right side of your WAM screen and it is highlighted. However, it doesn't show the "whole story" because it gets cut off by the small window.

To see the "whole story" you would need to:

- Click the **OP Alerts TAB** on the result section.
- Then click the first alert on the left side. The detail information will show on the right side.
- If you have more than 1 OP Alert, you need to click each one to see the detailed information for each run.
