45102	QUIGLEY,ALLEN	01/08/16 06:58	01/08/16	Individualized QC Program in Hematology

Effective 01/01/16 we will begin using an Individualized QC Program (IQCP) in Hematology. The following tests will be included in the program, most involve kit testing in addition to the PFA;

- 1.) Serum HCG
- 2.) Serum Mono
- 3.) Rapid Malaria
- 4.) PFA

The alternative to setting up this program would be to perform daily QC on two levels of control. By setting up this program in addition to performing the validation that has been completed on the kit testing comparing internal vs. external QC results we will be able to operate as we do now with one exception.

We will now be required to perform external QC once a month. With the kit testing we will do this the same way we did it for the previous validation. For the PFA a normal donor will need to be drawn and both an EPI and ADP cartridge will need to be run.

A section will be added to the Heme Manual Cell Maintenance log for recording results and also reminding us to perform this task monthly. Please see me if you have any questions or concerns.

-----Thanks, Al
