<b>TITLE: Intra-hospital Transport of Blood, Blood Components and Derivatives</b>	<b>Revision Date:</b> 30-September-17	<b>Issue Date:</b> 30-September-15
<b>Document Number: BLB60800</b>	<b>Status: <span style="color: red;">Approved</span></b>	
<b>Distribution: Blood Bank Manual &amp; Nursing Manuals</b>	<b>Page: 1 of 4</b>	
<b>Approved by:</b> Sarah Asmussen, Manager of Diagnostic Services	<b>Signed by:</b> 	

### PURPOSE:

This policy will provide staff guidelines in transportation of blood, blood components, and plasma derivatives within the hospital. Intra-hospital transportation shall be described as all situations where blood products are removed from designated storage equipment; located either in the Transfusion Services Blood Bank or the Operating Room. For situations where blood will be shipped to any location outside of this hospital policy **BLB60900: Inter-Facility Shipping of Blood, Blood Components and Derivatives** shall be used.

### POLICY:

Product storage requirements are set by laboratory policy **BLB60200: Storage of Blood, Blood Components and Derivatives**.

Traceability of all products must be maintained. A requisition is required for all product requests that includes patient identification, ordering practitioner identification, required tests, product requested, and expected time of transfusion/infusion. Traceability also requires use of the Transfusion Record that is added to the patients chart. See **BLB60300: Ordering Blood, Blood Components and Derivatives** for additional details.

Product labeling with unequivocal patient identification must be completed prior to issue.

<b>NOTE: This is a CONTROLLED document for internal use only. Any documents appearing in paper form are not controlled and should be checked against electronic version prior to use.</b>

On the product tag this includes patient identifiers, compatibility requirements, Blood Bank ID (S) Number, and attached Transfusion Record. Prior to issue these parameters are reviewed to ensure product is fit for transfusion.

Only products visually inspected and deemed compatible by medical laboratory technologists or Hematopathologist can be issued. See **BLB60500: Visual Inspection of Blood, Blood Components and Derivatives** for more specific details. In an emergent situation the ordering practitioner may request uncrossmatched blood products. See **BLB50100: Emergency Issue of Blood, Blood Components and Derivatives**.

Only qualified person(s) are allowed to issue, transport or infuse blood products. At STHA these person(s) are: MLTs, nurses, and physicians.

Acceptable transportation timelines are strict so the removal of blood products from storage should be held until patient preparation (consent, pre-medication, etc) is complete. All transfusions must be completed within 4 hours of issue. If a delay of infusion is expected the product must be returned to the lab immediately. Any blood product out of controlled temperatures for 30 minutes or greater must be transfused or returned to the laboratory for disposal by laboratory personnel. Discarding of the product will follow **BLB61100: Documenting the Final Status of Returned or Discarded Blood, Blood Components and Derivatives**.

Products manipulated such as spiking, warming, pooling, etc will not be returned to inventory. If manipulated products are not transfused they must be returned to the laboratory and the manipulation must be clearly described on the unit tag. The product will be received back into the laboratory information system and discarded as Unused –

patient related.

After transfusion initiation, cessation, or completion the blood, plasma, or platelet bags, empty or not, must be returned to the laboratory. Fill out the back of the crossmatch tag and return to the lab sealed in a biohazard bag.

Training requirements will be under the scope of the STH Transfusion Committee and performed by the appropriate laboratory or staff education personnel.

**SPECIAL SAFETY PRECAUTIONS:**

- Handle all human blood and blood products using “Routine Practices”
- Please refer to the Northwest Territories Infection Prevention and Control Manual, March 2012
- Prior to testing or infusion all patients are to be identified as per I-0500 Use of Two Patient Identifiers.
