

SCC-LIS_TIP OF THE WEEK

MODULE: SoftBank	SOFTWARE VERSION: 25.1.3.0.16
TOPIC: CBSRO Referral Test Code	ISSUE DATE: 02December2016
DISTRIBUTION: Technologists_Bank	PAGE: 1 of 1
ISSUED BY: M-L Dufresne, Territorial LIS Administrator	

TOPIC/QUESTION:

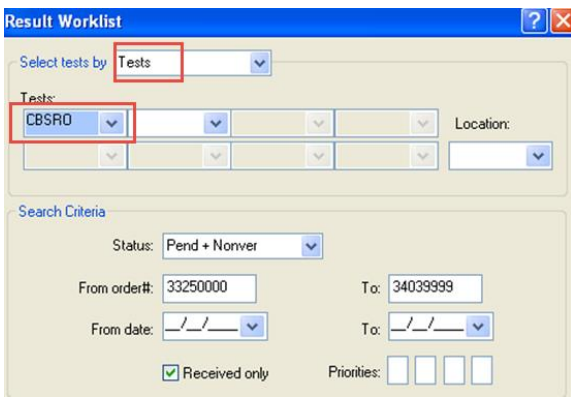

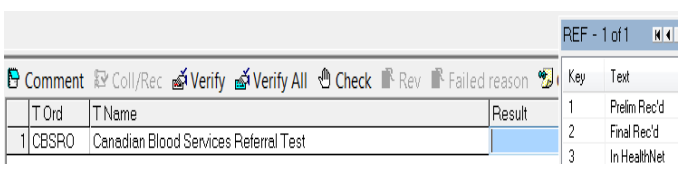

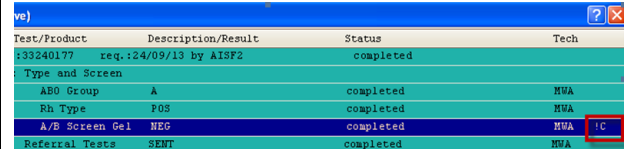

What is the CBSRO test code? How do I result it? Can I batch result a bunch at the same time?

ANSWER/TIP:

The CBSRO (CBS Referred Out) test was created by the Blood Bank Implementation Team in 2012 to fulfill two main purposes:

- 1-To allow for tracking referral bank tests
- 2-As a mechanism to exclude referral bank tests from capturing workload.

When the results come back from CBS, the CBSRO test must be resultted in *BOTH* **SoftLab** and **SoftBank**

RESULTING IN SOFTLAB		RESULTING IN SOFTBANK	
1	Resulting Worklist>Select tests by "Tests">CBSRO	1	SoftBank>Patient>Orders>Results
2		2	Result each test performed by CBS using NN for "Negative, Not Tested" Or PN for "Positive, Not Tested"
		3	Result the "CBSRO" test as <i>SENT</i> 
3	Result the test using the keypad provided 	4	You may add a RESULT comment summarizing that the test was performed at CBS 
		5	No, a blood bank worklist cannot be created in order to batch result these. This is because CBSRO is on a referral workstation and BB worklists are site specific.
