SCC-LIS_TIP OF THE WEEK

| MODULE: SoftLab	SOFTWARE VERSION: 4.0.8
TOPIC: Referral Prenatal Testing	ISSUE DATE: 01FEB2018
DISTRIBUTION: End Users_All	PAGE: 1 of 1
ISSUED BY: April Darrach, Territorial LIS Administrator	

TOPIC/QUESTION:

I have a request for prenatal testing, is there a group code that I can order for everything?

ANSWER/TIP:

Yes – the test code is PREN – Prenatal screen – Initial screen for pregnant woment (5). This code includes the Provincial Lab referral tests for: syphilis, HBsAg, Varicella, Rubella and HIV. Once PREN is ordered, an RBS rule will reflex the type and screen, CBS referred code (TSR) and the CBS referred out (CBSRO) which will need to be collected and received once the reflex occurs.

If the infectious sendout tests are added individually, the TSR and CBSRO will need to be manually ordered as NO reflex will occur. ***See LISXXXX: Ordering Prenatal Testing for Sendout for complete information

EXAMPLE:

→Go back and "Collect and Receive all" *NOTE: YPCC clerks can skip this step. Collecting and receiving is done by Lab Assistants.*

Hit OK to bypass BBID screen. Save→hit OK to bypass BBID screen. Print labels and place CBSRO label on tube for tasklisting
