Type: Laboratory Services Program SOP Policy Number: Date Approved:

PROGRAM Standard Operating Procedure – Laboratory Services			
Title: MIC33000 – Wound Culture- Policy Number:			
Superficial			
Program Name: Laboratory Services			
Applicable Domain: Lab, DI and Pharmacy Services			
Additional Domain(s):			
Effective Date: Next Review Date:			
Issuing Authority: Date Approved:			
Director of Health Services			
Accreditation Canada Applicable Standard: N/A			

### **GUIDING PRINCIPLE:**

A wide variety of microorganisms that reside on the skin and mucous membranes of the body, as well as those found in the environment, can cause skin and soft tissue infections. These organisms enter the body through breaks in the skin or mucous membranes, through wounds made by trauma or bites (exogenous), as a complication of surgery, foreign-body implants (endogenous) or they can be spread through the vascular system (hematogenous).

### **PURPOSE/RATIONALE:**

To determine the presence or absence of bacterial pathogens in superficial wound specimens.

# SCOPE/APPLICABILITY:

This procedure applies to Medical Laboratory Technologists (MLTs) processing specimens for superficial wound culture.

## **SAMPLE INFORMATION:**

Туре	Swab			
Турс	Amie's with or with charcoal			
	1. Superficial wound specimens:			
Source	Abrasion, cut, laceration, ulcer, skin diseases (impetigo, folliculitis, cellulitis), first degree burn, superficial surgical incision, etc.			
Stability	<ul> <li>If the sample is received in the laboratory and processed greater than 48 hours from collection:</li> <li>Add specimen quality comment: "Delayed transport may adversely affect pathogen recovery"</li> </ul>			

**Disclaimer Message:** This is a **CONTROLLED** document for internal use only. Any documents appearing in paper form are not controlled and should be checked against the electronic file version prior to use.

Policy Number: Date Approved: Page 1 of 7

Issuing Authority: Director of Health Services	Policy Number:
Next Review Date:	Date Approved:

Storage Requirements	Room temperature
Criteria for rejection	<ol> <li>Unlabeled/mislabeled swabs</li> <li>Specimen container label does not match patient identification on requisition</li> <li>Specimens for culture submitted in container with formalin</li> <li>Submission of specimens to determine if an infection is present should be discouraged</li> </ol>

## **REAGENTS and/or MEDIA:**

- Blood agar (BA), Chocolate agar (CHO) and MacConkey agar (MAC)
- Identification reagents: catalase, oxidase, Staph latex test, Strep latex test, etc.

### **SUPPLIES:**

- Disposable inoculation needles
- Microscope slides
- Wooden sticks

## **EQUIPMENT**

- Biosafety cabinet
- 35° ambient air and 35° CO<sub>2</sub> incubators
- Vitek 2 and supplies

#### SPECIAL SAFETY PRECAUTIONS:

Containment Level 2 facilities, equipment, and operational practices for work involving infectious or potential infectious materials or cultures.

- Ensure that appropriate hand hygiene practices be used.
- Lab gown must be worn when performing activities with potential pathogens.
- Gloves must be worn when direct skin contact with infected materials is unavoidable.
- Eye protection must be used when there is a known or potential risk of exposure of splashes.
- All procedures that may produce aerosols, or involve high concentrations or large volumes should be conducted in a biological safety cabinet (BSC).
- The use of needles, syringes and other sharp objects should be strictly limited.

All patient specimens are assumed to be potentially infectious. Routine Practices must be followed. Since viable micro-organisms are used, all cultures must be handled with appropriate precautions. All equipment in contact with cultures should be decontaminated by appropriate methods.

## **QUALITY CONTROL:**

• Refer to Test Manual for reagent quality control procedures

**Disclaimer Message:** This is a **CONTROLLED** document for internal use only. Any documents appearing in paper form are not controlled and should be checked against the electronic file version prior to use.

### PROCEDURE INSTRUCTIONS:

Step	Action				
Proce	Processing specimens for superficial wound culture				
1	<ul> <li>In the biosafety cabinet:</li> <li>Inoculate BA and MAC with the swab</li> <li>Ensure all surfaces of swab make contact with the agar</li> <li>Streak for isolated growth using a disposable inoculation needle</li> <li>Prepare smear by rolling the swab gently across the slide to avoid destruction of cellular elements and disruption of bacterial arrangements</li> </ul>				
2	Incubate all media:  ■ Place BA in the CO₂ incubator  ■ Place MAC in the O₂ incubator				
3	Allow smear to dry and perform gram stain. Gram stain must be read before culture plates. Refer to MIC20115-Gram Stain Procedure.				

Probable Pathogens				
<ul> <li>Arcanobacterium</li> <li>Aeromonas</li> <li>Bacillus anthracis*+</li> <li>β-hemolytic streptococci</li> <li>Brucella*+</li> <li>Campylobacter</li> <li>Candida spp.</li> <li>Capnocytophaga spp.</li> <li>Chromobacterium</li> <li>Erysipelothrix</li> <li>i</li> </ul>	Haemophilus influenzae Helicobacter Kingella kingae Listeria spp. Molds Moraxella catarrhalis Neisseria gonorrhoeae Neisseria meningitides*+ Nocardia spp. Pasteurella multocid	<ul> <li>Streptococcus pneumoniae</li> <li>Vibrio spp.</li> <li>Yersinia spp.</li> </ul>		
Potential Pathoge	ns	Commensal Skin Flora		
<ul> <li>Aerobic gram-negative-backlisted above</li> <li>Anaerobes not listed above</li> <li>Enterococcus spp.</li> <li>Staphylococcus lugdunensis</li> <li>Staphylococcus intermedius</li> <li>Yeasts not listed above</li> </ul>	<ul><li>Micro</li><li>Cory</li><li>Bacili</li><li>Nonp</li></ul>	<ul> <li>Coagulase-negative Staphylococcus</li> <li>Micrococcus spp.</li> <li>Corynebacterium spp.</li> <li>Bacillus spp. not listed above</li> <li>Nonpathogenic Neisseria spp.</li> <li>viridans Streptococcus grp.</li> </ul>		

<sup>\*</sup> Risk group 3 organism. If suspected, refer to Policy B-0160: "Specimens Containing Suspected Risk Group 3 Pathogens" for Primary Specimen Handling Flow Chart

**Disclaimer Message:** This is a **CONTROLLED** document for internal use only. Any documents appearing in paper form are not controlled and should be checked against the electronic file version prior to use.

Policy Number: Page 3 of 7

<sup>+</sup> All work-up should be performed in the BSC

Type: Laboratory Services Program SOP Policy Number: Date Approved:

## **INTERPRETATION OF RESULTS:**

Step	Action				
эсер	Ensure growth on culture media correlates with gram stain results. If				
	discordant results are found between the gram stain and growth:				
	Re-examine smear and culture plates				
1	Check for anaerobic growth				
	Re-incubate media to resolve				
	Consider re-smearing or re-planting specimen				
	Observe BA plate at 24 hours and 48 hours				
2	Observe MAC plate at 24 hours				
	If single morphology growing on plates:				
	<ul> <li>If organism is a probable pathogen:</li> </ul>				
	Perform and report identification				
	Perform and report susceptibility testing as per ASTM				
	<ul> <li>If organism is a potential pathogen or commensal skin flora:</li> </ul>				
	Perform and report identification				
	Perform and report susceptibility testing if any of the following are				
	true:				
	o 3 to 4+WBC in the gram stain				
	Organism is intracellular in the gram stain				
3	Clinical diagnosis is infection  Patient is immunes appropried.				
3	Patient is immunocompromised     Multiple cultures are positive for the same organism				
	<ul> <li>Multiple cultures are positive for the same organism</li> <li>If NONE of the above are true, perform identification and list</li> </ul>				
	<ul> <li>If organism is an anaerobe:</li> </ul>				
	<ul> <li>Perform and report identification</li> </ul>				
	<ul> <li>Perform and refer to <i>DynaLIFE</i> for susceptibility testing if ANY of the</li> </ul>				
	following are true:				
	<ul> <li>Organism is a probable pathogen</li> </ul>				
	Organism is intracellular				
	<ul> <li>Organism is predominant in direct smear</li> </ul>				
	<ul> <li>Multiple or previous cultures are positive for the same organism</li> </ul>				
	If NONE of the above are true, perform identification and list				
	If multiple morphologies growing on plates:				
	<ul> <li>If organisms are probable pathogens:</li> </ul>				
	Perform and report identification				
	Perform and report susceptibility testing as per ASTM				
	If organisms are potential pathogens:				
	Perform minimal identification and list if any of the following are				
4	true:				
	Moderate to numerous epithelial cells in the gram stain				
	No WBC in the gram stain     No clinical history that indicates infection was provided.				
	<ul> <li>No clinical history that indicates infection was provided</li> <li>≥3 organisms growing, excluding probable pathogens</li> </ul>				
	<ul> <li>≥3 organisms growing, excluding probable pathogens</li> <li>If none of the above are true:</li> </ul>				
	<ul> <li>Perform identification and report 1 or 2 predominant potential</li> </ul>				
	pathogens				
	patriogens				

**Disclaimer Message:** This is a **CONTROLLED** document for internal use only. Any documents appearing in paper form are not controlled and should be checked against the electronic file version prior to use.

Policy Number: Date Approved: Page 4 of 7

Title: MIC33000-Wound Culture-Superficial	Type: Laboratory Services Program SOP
Issuing Authority: Director of Health Services	Policy Number:
Next Review Date:	Date Approved:

- Perform susceptibility testing and report if any of the following are true:
  - 3 to 4+WBC in the gram stain
  - o Organism is intracellular in the gram stain
- Minimally identify and list any non-predominant potential pathogens
- ➤ Minimally identify and list >2 potential pathogens
- If organisms are commensal skin flora:
  - > Minimally identify and list commensal skin flora

#### **REPORTING INSTRUCTIONS:**

IF	REPORT
No growth after 1 day	PRELIM: • Report: "No Growth after 1 Day. Further report to follow"
No growth after 2 days	FINAL: • Report: "No Growth after 2 Days"
Mix of skin flora	<ul><li>Report: "Mixture of skin flora"</li><li>List quantitation</li></ul>
Mix of enteric Gram-negative bacilli	<ul><li>Report "Mixture of coliform organisms"</li><li>List quantitation</li></ul>
Growth or mix of other non-pathogenic organisms	<ul> <li>Report "Commensal flora" or "Commensal skin flora"</li> <li>List quantitation</li> </ul>
Growth of potential pathogen(s)	<ul> <li>Report organisms(s) identification</li> <li>List quantitation</li> <li>Report susceptibility as per interpretation of results</li> </ul>
Growth of pathogen(s)	<ul> <li>Report organisms(s) identification</li> <li>List quantitation</li> <li>Report susceptibility results as per ASTM</li> </ul>

#### NOTE:

- Refer to Reportable Diseases Public Health Act as of September 2009 for reporting to OCPHO (HPU1)
- Refer to LQM70620-Laboratory Critical Results List-Microbiology for results that need to be phoned to ordering location
- Refer to MIC36100-Nosocomial Infection Notification Job Aid to determine if organism needs to be copied to Infection Prevention and Control
- Refer to MIC36200-Referral of Category A Specimens to APL for sending category A isolates to APL
- Refer to MIC36300-Referral of Category B Specimens to APL for sending isolates to APL
- Refer to MIC36400-Referral of Category B Specimens to DL for sending isolates to DynaLIFE

**Disclaimer Message:** This is a **CONTROLLED** document for internal use only. Any documents appearing in paper form are not controlled and should be checked against the electronic file version prior to use.

Type: Laboratory Services Program SOP Policy Number: Date Approved:

#### LIMITATIONS:

- 1. The results of wound cultures will only be as valuable as the quality of the specimen submitted, transport and expedient processing.
- 2. The microbiologist plays a critical role in the treatment of wound infections because practitioners often consider the report from the laboratory as definitive proof of infection. Providing inappropriate identifications and susceptibility results can prompt unnecessary treatment.
- 3. The presence of WBC is an indication of an inflammatory or infectious process, while the presence of epithelial cells indicates surface contamination of the specimen. Specimens containing numerous epithelial cells yield culture results of questionable accuracy in the diagnosis of the infectious process.
- 4. If a patient is immunocompromised or has poor vascular supply, inflammatory cells may not be present in the specimen as a guide to the extent of workup of the culture.
- 5. Antibiotics administered prior to sample collection may negatively affect the recovery of organisms associated with infection.
- 6. Many wound infections are polymicrobic and the isolation of an organism in culture may or may not correlate with infection of the wound.
- 7. Unusual diagnoses and treatment considerations may alter the usual policies of the laboratory in workup of organisms and reporting susceptibility results.
- 8. The lack of isolation of a pathogen does not necessarily mean that the laboratory was unable to detect the agent. Other inflammatory disease can have the same presentations in infectious diseases, including the presence of WBC on the gram stain.
