PROGRAM Standard Operating Procedure – Laboratory Services			
Title: MIC32500 -	Policy Number:		
Eye Culture-Superficial			
Program Name: Laboratory Services			
Applicable Domain: Lab, DI and Pharmacy Services			
Additional Domain(s):			
Effective Date: Next Review Date:			
Issuing Authority:	Date Approved:		
Director of Health Services			
Accreditation Canada Applicable Standard: N/A			

GUIDING PRINCIPLE:

Inflammatory eye conditions can be separated into several clinical syndromes. A variety of microorganisms can play major roles, both in acute and in chronic conditions.

PURPOSE/RATIONALE:

This standard operating procedure describes how to determine the significance of growth in superficial eye specimens.

SCOPE/APPLICABILITY:

This procedure applies to Medical Laboratory Technologists (MLTs) processing specimens for superficial eye culture.

SAMPLE INFORMATION:

Туре	Swab • Amie's with or without charcoal
Source	Conjunctiva: inflammation of the conjunctiva (the mucous membrane covering the sclera) > Swab of conjunctiva surface / pus
Stability	 If the sample is received in the laboratory and processed greater than 48 hours from collection: Add specimen quality comment: "Delayed transport may adversely affect pathogen recovery"
Storage Requirements	Room temperature

Disclaimer Message: This is a **CONTROLLED** document for internal use only. Any documents appearing in paper form are not controlled and should be checked against the electronic file version prior to use.

Criteria for	1. Unlabeled/mislabelled swabs
	2. Specimen container label does not match patient
rejection	identification on requisition

NOTE:

- If gonorrhoeae culture is ordered on eye specimen, superficial eye culture along with gonorrhoeae culture will be performed. Refer to MIC33500-Gonorrhoeae Culture
- Refer to MIC34100-Body Fluid Culture for intraocular fluid
- Refer tissue or biopsy specimens for culture to DynaLIFE

REAGENTS and/or MEDIA:

- Blood agar (BA) and Chocolate agar (CHO)
- Identification reagents: catalase, oxidase, Staph latex test, Strep latex test, etc.

SUPPLIES:

- Disposable inoculation needles
- Microscope slides
- Wooden sticks

EQUIPMENT:

- Biosafety cabinet
- 35° ambient air and 35° CO₂ incubators
- Vitek 2 and supplies

SPECIAL SAFETY PRECAUTIONS:

Containment Level 2 facilities, equipment, and operational practices for work involving infectious or potentially infectious materials or cultures:

- Ensure that appropriate hand hygiene practices be used
- Lab gown must be worn when performing activities with potential pathogens
- Gloves must be worn when direct skin contact with infected materials is unavoidable
- Eye protection must be used when there is a known or potential risk of exposure of splashes
- All procedures that may produce aerosols, or involve high concentrations or large volumes should be conducted in a biological safety cabinet (BSC)
- The use of needles, syringes and other sharp objects should be strictly limited

All patient specimens are assumed to be potentially infectious. Routine Practices must be followed. Since viable micro-organisms are used, all cultures must be handled with appropriate precautions. All equipment in contact with cultures should be decontaminated by appropriate methods.

QUALITY CONTROL:

Refer to Test Manual for reagent quality control procedures

Disclaimer Message: This is a **CONTROLLED** document for internal use only. Any documents appearing in paper form are not controlled and should be checked against the electronic file version prior to use.

PROCEDURE INSTRUCTIONS:

Step	Action	
Processing specimens for superficial eye culture		
1	 In the biosafety cabinet: Inoculate BA and CHO with the swab Ensure all surfaces of swab make contact with the agar Streak for isolated growth using a disposable inoculation needle Prepare smear by rolling the swab gently across the slide to avoid destruction of cellular elements and disruption of bacterial arrangements 	
2	Incubate the media: • Place BA and CHO in the CO ₂ incubator	
3	Allow smear to dry and perform gram stain. Gram stain must be read before culture plates. Refer to MIC20115-Gram stain procedure.	

Probable Pathogens			
Haemophilus influenzae	Neisseria meningitidis		
 Moraxella spp. 	 Staphylococcus aureus 		
 Pseudomonas aeruginosa 	• Streptococcus pneumoniae		
Neisseria gonorrhoeae	 Streptococcus pyogenes 		
Potential Pathogens			
 Enteric Gram-negative bacilli Enterococcus spp. Haemophilus parainfluenzae 			
Commensal Flora			
Anaerobes	• Micrococcus spp.		
• Coagulase-negative Staphylococcus • Nonpathogenic Neisseria spp.			
 Corynebacterium spp. viridans Streptococcus grp. 			

INTERPRETATION OF RESULTS:

Step	Action
1	Ensure growth on culture media correlates with gram stain results. If discordant results are found between the gram stain and growth: Re-examine smear and culture plates Check for anaerobic growth Re-incubate media to resolve Consider re-smearing or re-planting specimen
2	Observe BA and CHO at 24 hours and 48 hours
3	 If organism is a probable pathogen: Perform and report full identification Perform and report susceptibility testing as per ASTM
4	 If organism is a potential pathogen: ➤ Perform and report full identification if there are ≤3 different potential pathogens

Disclaimer Message: This is a **CONTROLLED** document for internal use only. Any documents appearing in paper form are not controlled and should be checked against the electronic file version prior to use.

	Perform and report susceptibility testing as per ASTM on potential			
	pathogens if any of the following is true:			
	, , , ,			
	 3 to 4+WBC in the gram stain 			
	 Clinical diagnosis is infection 			
	 Patient is immunocompromised 			
	 Multiple cultures are positive for the same organism 			
	If >3 potential pathogens are present, list and do not perform or			
	report susceptibility testing			
	NOTE: Mixed enteric Gram-negative rods should be reported as mixture			
	of coliform organisms, not reported individually			
	If organism is commensal flora:			
_	Perform minimal identification and report as commensal flora			
5	NOTE: Mixed commensal flora should be reported as mixed commensal			
	flora			

REPORTING INSTRUCTIONS:

IF	REPORT
No growth after 1 day	PRELIM: Report: "No Growth After 1 Day" Report: "Further report to follow"
No growth after 2 days	FINAL: • Report: "No Growth After 2 Days"
Growth of probable pathogen	 Report organism full identification List quantitation Report susceptibility results as per ASTM
Growth of potential pathogen where full identification is required	 Report organism full identification List quantitation If indicated by procedure, perform and report susceptibility testing as per ASTM
Growth of potential pathogens where minimal identification and listing is required	 Report the minimal identification (i.e., Gram Negative Bacilli - Lactose Fermenter) List quantitation
Growth of commensal flora where minimal identification and listing is required	Report: "Commensal flora"List quantitation
Mix of commensal flora	Report: "Mixture of commensal flora"List quantitation
Mix of enteric Gram-negative bacilli	Report: "Mixture of coliform organisms"List quantitation

NOTE:

- Refer to Reportable Diseases Public Health Act as of September 2009 for reporting to OCPHO (HPU1)
- Refer to LQM70620-Laboratory Critical Results List-Microbiology for results that need to be phoned to ordering location
- Refer to MIC36100-Nosocomial Infection Notification Job Aid to determine if organism needs to be copied to Infection Prevention and Control
- Refer to MIC36200-Referral of Category A Specimens to APL for sending category A isolates to APL
- Refer to MIC36300-Referral of Category B Specimens to APL for sending isolates to APL
- Refer to MIC36400-Referral of Category B Specimens to DL for sending isolates to DynaLIFE.

LIMITATIONS:

- 1. False positive cultures can result from contamination of the specimen or plates with skin flora.
- 2. False negative results can occur if antimicrobial agents are given prior to collection of the specimen.
- 3. Even with the best techniques, culture often fails to yield the infecting organism.
