

TOPIC/QUESTION:

On Sunday, November 5th, we will set our clocks back one hour as daylight saving time comes to a close, at 2AM.

ANSWER/TIP:

LIS Servers and Applications

The system will automatically change to the correct time. This is a standard part of the Operating System.

PC Workstations

The PC will change automatically, you may see a pop-up in the bottom corner if you are logged on or the first time you log into a computer after the time changes.

Print Scheduler

Jobs that run between 1:00AM and 1:59AM will run twice. This is not a problem if the job finishes and flags the records before the job starts again. Jobs that do not finish before being restarted may print twice.

Timestamps

Some issues with collection and verification times cannot be avoided. The timestamps are generated with the current system time. A comment can always be attached to those orders collected or verified around the time change to avoid later confusion.
