- ABL800 QC- Please ensure when doing the daily maintenance on the ABL that you are checking the QC ampules. A couple times now techs have noticed that were all empty vials except for a couple.
- CA660- It has been noticed that we are getting more probe crash errors when using the aliquots tubes in the racks. We should start pouring them off into a cup to stop this from happening.
- Platelet Clumps- Please review the procedure on how to handle samples with platelet clumps.
- Vitros 7600:2- We have final word that the validation of the second 7600 is complete! Thanks to Jeff, Jobelle and Theresa for working hard on this. They supplied us with a chart with the approved reportable ranges and some updated info on Max dilutions, so I will try to create a new chart for the Job Aid book. Now we will have to determine how we want to run the 2 analyzers, and how we will distribute the extra work when it comes to maintenance, QC and calibrations. **Saturdays-** Change ERF and run QC on Gluc, Renal Panel, Trop and BHCG so you can run Stats on it while doing maintenance on 7600-1. If an overdose comes you can also pull the Acet, ETOH, Sali and run QC on 7600-2. To prepare you can also pull extra cartridges to place on the 7600-2 on Sat morning, just remember to place them on the 7600-1 when finished so they do not go to waste.
- Jan Schedule- To help with the point above, about the second 7600 I am going to try something on the Jan schedule. On days we have extra bodies on the 0900 shift, I will be putting someone on as the second Chemistry tech. Most Wednesdays this should occur, and I will do it as much as I can on other days. This 'Blue" 0900 will do daily, weekly and other scheduled maintenance, as well as try and help the 0630 tech with calibrations. We will try this out and see how it goes, and then revisit. I have also put a "V" on the Dec schedule for those that will complete these tasks in Dec.
- Downtime Dec 5 1100-1300.
- Privacy week- Please see the link below for another topic discussed during privacy week.
