- **Hand Hygiene-** Standing agenda item. Reminder to continue with our hand hygiene audits. 10 moments per month 😊
- **Citrol QC-** The new lot of Citrol QC has been released and it will be shipped this week with delivery by weeks end. Once they arrive, we will begin validation. I have received the Service Agreement from Sandy.
- **Trop Reagent-** The Trop reagent and cal should be arriving this Friday, per Quidel Customer Service. We are running very low on current reagent, so I have Celica sending a box of I Stat cartridges and QC down, so we have a backup. I have already run the QC so that is good for one week, so you will only need to run the simulator daily. It is set up in TQC so you can go in and add the order and result it. Collection container for iStat Trop is Mint Green and you run on the plasma. Thing to remember when we start using the iStat is if you start tropes on a patient using the Vitros, you will need to rerun those patients on the Vitros when reagent arrives, on top of the iStat. Same goes for those originally ran on the iStat. Order code for test is **VTROP**
- **Bulk Leave-** I am going to put a sign on the rack where leave requests go, this is just so we can have the bulk leave requests separate from those who still need to put in things for the remainder of this fiscal year.
- **Jan 26-27-** Dexterra will be doing service on the fire extinguishers. They may have to remove them but if they do they will replace it with a temporary one.
- **Blood Bank-**
 - New product coming for apheresis plasma, Amy is currently doing the validation for it. Typically, do not order it but letting us know in case we receive some.
 - Temperature checks, last month there were a few days where temps were not taken, please make sure you are completing this as well as the MTS QC- temp and RPM
 - If maintenance comes and does their maintenance, they usually forget to mark it off the checklist. You can either check it off for them or ask them to do it
