1. PURPOSE

This procedure describes the process to place laboratory orders for QC testing for autotransfusion procedures.

2. SCOPE

This procedure applies to QC testing for autotransfusion procedures.

3. **RESPONSIBILITY**

This procedure is performed by Specimen Processing staff.

4. **DEFINITIONS**

- A. Autotransfusion Transfusion of a patient's own blood; in this case, the blood is collected and reinfused during surgery.
- B. Perfusionist The medical professional responsible for extracorporeal oxygenation of the blood during open heart surgery
- C. GUI Graphical User Interface

5. **PROCEDURE**

A. General Information

- 1. The laboratory performs quality control testing for perioperative services including blood recovery via cell saver. According to AABB Standards, blood recovery is best measured by markers of red blood cell concentration and wash efficiency. The selected parameters are hematocrit, plasma potassium, and albumin levels pre- and post-processing.
- 2. There are two Cobe Brat 2 several instruments utilized by the perfusionists at Washington Adventist Hospital.

3. Lab orders are entered into the LIS via an outside location medical record number that is associated with each instrument. The chart below specifies the medical record number for each instrument:

Instrument	Serial Number	Medical Record #
Cobe Brat 2	2134	WPER-1
Cobe Brat 2	2247	WPER-2
Fresenius CATS	9CAA9458	WPER-3
Fresenius CATS	4CAA1720	WPER-4
Fresenius CATS	6CAA2459	WPER-6

- 4. The perfusionist will submit specimens for testing with a specific requisition (see Related Documents).
- 5. For each Cell Saver, 1-2 samples (pre- and post-processing) will be collected and sent for testing. Tests to be performed include hematocrit, potassium, and albumin.
- 6. Once results are entered into the LIS, the reports will automatically be faxed to 301-891-5036 via Sunquest fax # 1221. Reports will print Monday through Friday with WAH Outside location scheduled reports. Place WPER reports in interdepartmental mail addressed "Attention: WAH perfusionist".

B. Order in LIS using function REI

1. From the requisition determine the medical record number to place orders into the LIS. This is noted in the first box that states "Check the applicable Analyzer". The medical record number is denoted in square brackets after the serial number of the analyzer. In the example below, WPER-3 is the medical record number.

Example: **FRESENIUS CATS, SN 9CAA9458 [WPER-3]**

Note: If "Other:" section of requisition is completed, then a new WPER- medical record number must be created. Refer to section C below.

2. Enter orders in the LIS using the medical record number via function REI or GUI Order Entry. LIS test code is noted at the end of test name on the requisition.

Example: Pre HCT (PHCT) - **PHCT** is the LIS test code.

- 3. Use tech code 906 (WAH, Perfusionist) as the "collected by".
- 4. Label specimen with Sunquest accession label.
- 5. Potassium and albumin specimens will be centrifuged prior to delivery to chemistry. Hematocrit testing is delivered to hematology and placed on the rocker.

Form revised 3/31/00

6. File the manual requisition in the Outpatient Requisition file folder.

C. Create a new WPER- Medical Record Number in function REI

- 1. Function: **REI** BATCH HOSPITAL ID <WAH>: Type / (back slash) and press **Enter**.
