

TRAINING UPDATE

Lab Location: SGMC & WAH
Department: Core

Date Distributed: 4/18/2016
Due Date: 5/16/2016
Implementation: 5/17/2016

DESCRIPTION OF PROCEDURE REVISION

Name of procedure:

Albumin by Dimension Vista® System SGAH.C88, WAH.C84 v1

Description of change(s):

All changes are minor, revision needed to match current practice

| Section | Reason |
|----------|-----------------------------------|
| | Update title page |
| 3.2 | Specify anticoagulant |
| 4.2 | Add safety warning |
| 5.2 | Remove 31 day stability |
| 6.4, 6.6 | Replace LIS with Unity Real Time |
| 17 | Update package insert information |

This revised SOP will be implemented on May 17, 2016

Document your compliance with this training update by taking the quiz in the MTS system.

Approved draft for training (version 1)

1. TEST INFORMATION

| Assay | Method/Instrument | Local Code |
|--------------|--------------------------|-------------------|
| Albumin | Dimension Vista® System | ALB |

| Synonyms/Abbreviations |
|---|
| ALB, included in Batteries/Packages: COMP, LIVP, RENP |

| Department |
|-------------------|
| Chemistry |

Form revised 2/02/2007

2. ANALYTICAL PRINCIPLE

The albumin method is an adaptation of the bromocresol purple (BCP) dye-binding method reported by Carter and Louderback. Because of an enhanced specificity of BCP for albumin, this method is not subject to interference. Multiple wavelength blanking increases sensitivity and minimizes spectral interference from lipemia.

In the presence of a solubilizing agent, BCP binds to albumin at pH 4.9. The amount of albumin-BCP complex is directly proportional to the albumin concentration. The complex absorbs at 600 nm and is measured using a polychromatic (600, 540, 700 nm) endpoint technique.

3. SPECIMEN REQUIREMENTS

3.1 Patient Preparation

| Component | Special Notations |
|-----------------------------------|--|
| Fasting/Special Diets | N/A |
| Specimen Collection and/or Timing | Normal procedures for collecting and storing serum and plasma may be used for samples to be analyzed by this method. |
| Special Collection Procedures | N/A |
| Other | N/A |

3.2 Specimen Type & Handling

| Criteria | |
|---|--|
| Type -Preferred -Other Acceptable | Plasma (Lithium Heparin) Serum |
| Collection Container | Plasma: Mint green top tube (PST) Serum: Red top tube, Serum separator tube (SST) |
| Volume - Optimum - Minimum | 1.0 mL 0.5 mL |
| Transport Container and Temperature | Collection container or Plastic vial at room temperature |
| Stability & Storage Requirements | Room Temperature: 8 hours |
| | Refrigerated: 2 days |
| | Frozen: 6 months |
| | Instrument on board aliquot stability 2 hours |

Form revised 2/02/2007

| Criteria | |
|---|---|
| Timing Considerations | Serum or plasma should be physically separated from cells as soon as possible with a maximum limit of two hours from the time of collection. |
| Unacceptable Specimens & Actions to Take | Specimens that are unlabeled, improperly labeled, or those that do not meet the stated criteria are unacceptable. Request a recollection and credit the test with the appropriate LIS English text code for “test not performed” message. Examples: Quantity not sufficient-QNS; Wrong collection-UNAC. Document the request for recollection in the LIS. |
| Compromising Physical Characteristics | Gross hemolysis. Reject sample and request a recollection. Credit the test with the appropriate LIS English text code explanation of HMT (Specimen markedly hemolyzed) |
| Other Considerations | Allow Red Top or SST to clot completely prior to centrifugation. |

4. REAGENTS

Refer to the Material Safety Data Sheet (MSDS) supplied with the reagents for complete safety hazards. Refer to the section in this procedure covering “SAFETY” for additional information.

4.1 Reagent Summary

| Reagents | Supplier & Catalog Number |
|----------|--|
| Albumin | Siemens, Flex® reagent cartridge, Cat. No. K1013 |

4.2 Reagent Preparation and Storage

NOTES: Each container must be labeled with (1) substance name, (2) lot number, (3) expiration date, (4) any special storage instructions; check for visible signs of degradation. When placed onboard the analyzer, the instrument captures the date / time loaded and calculates and tracks the opened expiration. Refer to the Material Safety Data Sheet (MSDS) for a complete description of hazards. If a specific hazard is present, it will be noted in this procedure when the hazard is first encountered in a procedural step.

Contains 2-Chloracetamide. May cause an allergic skin reaction. Wear protective clothing, gloves and eye/face protection.

| | |
|------------------|-------------------|
| Reagent | Albumin |
| Container | Reagent cartridge |
| Storage | Store at 2-8° C |

| | |
|--------------------|--|
| Stability | <ul style="list-style-type: none"> • Reagent is stable until expiration date stamped on the reagent cartridges. • Sealed wells on the instrument are stable for 30 days. • Once wells 1 - 12 have been entered by the instrument, they are stable for 7 days. |
| Preparation | All reagents are liquid and ready to use. |

5. CALIBRATORS/STANDARDS

5.1 Calibrators/Standards Used

| Calibrator | Supplier and Catalog Number |
|------------|--|
| CHEM 4 CAL | Siemens Dimension Vista®, Cat. No. KC140 |

5.2 Calibrator Preparation and Storage

NOTE: Date and initial all calibrators upon opening. Each container must be labeled with (1) substance name, (2) lot number, (3) date of preparation, (4) expiration date, (5) any special storage instructions; check for visible signs of degradation. When placed onboard the analyzer, the instrument captures the date / time loaded and calculates and tracks the opened expiration.

| | |
|--------------------------|--|
| Calibrator | CHEM 4 CAL |
| Preparation | CHEM 4 CAL is ready for use. No preparation required. |
| Storage/Stability | <ul style="list-style-type: none"> • Store at 2-8° C • Unopened calibrator is stable until expiration date stamped on the box. • Opened Calibrator: once the stopper of the vial is punctured, assigned values are stable for 7 days when stored on board the Dimension Vista System. |

5.3 Calibration Parameter

| Criteria | Special Notations |
|------------------------------------|--|
| Reference Material | CHEM 4 CAL |
| Assay Range | 0.0 – 8.0 g/dL |
| Suggested Calibration Level | See Reagent Package Insert for lot specific assigned values in g/dL |
| Frequency | <ul style="list-style-type: none"> • Every new reagent cartridge lot. • Every 90 days for any one lot • When major maintenance is performed on the analyzer. • When control data indicates a significant shift in assay. |
| Calibration Scheme | 2 levels, n = 5 |

5.4 Calibration Procedure

Auto Calibration:

1. Place the required calibrator vials in a carrier. Make sure the barcode labels are entirely visible through the slots.
2. Place the carrier in the loading area.
3. Position the carrier with the labels facing away from the user.
4. Press the **Load** button.
5. Automatic calibration requires that calibrators be on the instrument. As the time for processing approaches, the instrument reviews onboard inventory for the appropriate calibrators.

Manual Calibration:

1. Verify that calibrators and reagents are in inventory on the instrument.
2. Press **System > Method Summary > Calibration**.
3. Select a method from the sidebar menu. Press the **Order Calibration** button on the screen.
4. Verify that the information on the screen is correct. Verify that the calibrator lot is correct using the drop-down menu.
 - a. When calibrating using Vials press **OK**.
 - b. When calibrating using Cups, check the Use Cups box. This displays the rack and cup position fields. For additional cups use the positions in ascending order. Be sure to use the number of calibration levels and cups as specified in the method IFU. Scan the rack barcode and place calibrator cups in an adapter in position 1 on a rack. Press **OK** and load the rack on the instrument.
5. The status field in the calibration screen changes sequentially to Awaiting Scheduling, Preparing Calibrators and Processing.

5.5 Tolerance Limits

| IF..... | THEN..... |
|--|---|
| If result fall within assay-specific specification, and QC values are within acceptable limits, | proceed with analysis |
| If result falls outside assay-specific specification, or QC values are out of Acceptable limits, | troubleshoot the assay and/or instrument and repeat calibration |

6. QUALITY CONTROL

6.1 Controls Used

| Controls | Supplier and Catalog Number |
|---|--|
| Liquichek™ Unassayed Chemistry Control Levels 1 and 2 | Bio-Rad Laboratories Cat. No. 691 and 692 |

6.2 Control Preparation and Storage

NOTE: Date and initial all controls upon opening. Each container should be labeled with (1) substance name, (2) lot number, (3) date of preparation, (4) expiration date, (5) initials of tech, and (6) any special storage instructions; check for visible signs of degradation. A barcode label is produced and placed on the vial.

| | |
|--------------------------|---|
| Control | Liquichek Unassayed Chemistry Controls, Level 1 and 2 |
| Preparation | Allow the frozen control to stand at room temperature (18-25°C) until completely thawed. Swirl the contents gently to ensure homogeneity. (Do not use a mechanical mixer) Use immediately. After each use, promptly replace the stopper and return to 2-8°C storage. |
| Storage/Stability | Once the control is thawed, all analytes will be stable for 15 days at 2-8°C. Unthawed controls are stable until the expiration date at -20 to -70°C. |

6.3 Frequency

Analyze all levels of QC material after every calibration and each day of testing (notated on the QC frequency sheets posted on the instruments).

Refer to the Dimension Vista® QC Schedule in the Laboratory policy Quality Control Program and in the Dimension Vista® Quick Reference Guide.

6.4 Tolerance Limits

| Step | Action |
|------|---|
| 1 | Acceptable ranges for QC are programmed into the instrument's Quality Control software system and Unity Real Time , and may be posted near the instrument for use during computer downtime. |
| 2 | Run Rejection Criteria <ul style="list-style-type: none"> Anytime the established parameters are exceeded (if one QC result exceeds 2 SD), the run is considered out of control (failed) and patient results must not be reported. The technologist must follow the procedure in the Laboratory QC Program to resolve the problem. |
| 3 | Corrective Action: <ul style="list-style-type: none"> All rejected runs must be effectively addressed through corrective action. Steps taken in response to QC failures must be documented. Patient samples in failed analytical runs must be <u>reanalyzed according to the Laboratory QC Program</u>. Supervisors may override rejection of partial or complete runs only with detailed |

| Step | Action |
|------|---|
| | <p>documentation and criteria for overrides that are approved by the Medical Director. Consult corrective action guidelines in Laboratory QC Program. Follow corrective action guidelines in the Laboratory QC Program.</p> <ul style="list-style-type: none"> • Corrective action documentation must follow the Laboratory Quality Control Program. |
| 4 | <p>Review of QC</p> <ul style="list-style-type: none"> • QC must be reviewed weekly by the Group Lead or designee and monthly by the Supervisor/Manager or designee. • If the SD and/or CV are greater than established ranges, investigate the cause for the imprecision and document implementation of corrective actions. |

6.5 Review Patient Data

Each result is reviewed for error messages. Refer to the Dimension Vista system manual “Error messages” section for troubleshooting. Resolve any problems noted before issuing patient reports.

6.6 Documentation

- QC tolerance limits are programmed into the instrument and Unity Real Time; it calculates cumulative mean, SD and CV and stores all information for easy retrieval.
- Quality control records are reviewed daily at the bench, weekly by the Group Lead or designee, and monthly by the Supervisor/Manager or designee.
- Refer to complete policies and procedures for QC documentation and for record retention requirements in the Laboratory QC Program.

6.7 Quality Assurance Program

- Each new lot number of reagent or new shipment of the same lot of reagent must be tested with external control materials and previously analyzed samples. Performance of the new lot must be equivalent to the previous lot; utilize published TEA for acceptability criteria.
- Training must be successfully completed and documented prior to performing this test. This procedure must be incorporated into the departmental competency assessment program.
- The laboratory participates in CAP proficiency testing. All proficiency testing materials must be treated in the same manner as patient samples.
- Monthly QC must be presented to the Medical Director or designee for review and signature.
- Monthly QC mean and SD are sent to Bio-Rad Laboratories for peer group comparison.

- Consult the Laboratory QC Program for complete details.

7. EQUIPMENT and SUPPLIES

7.1 Assay Platform

Dimension Vista® System

7.2 Equipment

- Refrigerator capable of sustaining 2–8°C.
- Freezer capable of sustaining range not to exceed -20 to -70°C.
- Centrifuge

7.3 Supplies

- Aliquot Plates
- System Fluids
- Assorted calibrated pipettes (MLA or equivalent) and disposable tips

8. PROCEDURE

ALB Flex® reagent cartridge Cat. No. K1013 is required to perform this test.

Albumin is performed on the Dimension Vista® System after the method is calibrated (see Reference Material in Calibration section) and Quality Controls are acceptable.

NOTE: For all procedures involving specimens, buttoned lab coats, gloves, and face protection are required minimum personal protective equipment. Report all accidents to your supervisor.

The package insert for a new lot of kits must be reviewed for any changes before the kit is used. A current Package Insert is included as a Related Document.

| 8.1 | Sample Processing |
|-----|--|
| 1. | A sample rack holding tubes or cups is placed on the rack input lane. |
| 2. | The sample shuttle moves the rack to the barcode reader which identifies the rack and samples to the system. |
| 3. | The rack moves into the sample server and to the rack positioner. |
| 4. | At the same time, aliquot plates move from the aliquot loader into position. |
| 5. | The aliquot probe aspirates the sample from the tubes or cups and dispenses it into the wells of the aliquot plates. |
| 6. | After each aspirate-dispense action, the probe is thoroughly rinsed inside and out to prevent sample carryover. |

| | |
|------------|---|
| 8.1 | Sample Processing |
| 7. | When sample aspiration is completed, the sample server moves the rack back to the sample shuttle, where it is placed on the output lane and can be removed by the operator. |

| | |
|------------|--|
| 8.2 | Specimen Testing |
| 1. | For QC placement and frequency, refer to the Dimension Vista® QC Schedule in the Laboratory QC Program. |
| 2. | Follow the instructions, outlined in the Dimension Vista® Operator’s Manual |
| 3. | The instrument reporting system contains error messages to warn the user of specific malfunctions. Results followed by such error messages should be held for follow-up. Refer to the Dimension Vista® system manual “Error messages” section for troubleshooting. |
| 4. | Follow protocol in Section 10.5 “Repeat criteria and resulting” for samples with results above or below the Analytical Measurement Range (AMR). Investigate any failed delta result and repeat, if necessary. |
| 5. | Append the appropriate English text code qualifier messages to any samples requiring a comment regarding sample quality and/or any other pertinent factors. |

| Test Conditions | |
|------------------------|------------------------|
| Sample Volume: | 1.67 µL |
| Reagent 1 Volume: | 41.7 µL |
| Reaction Time: | 2.2 minutes |
| Test Temperature: | 37° C |
| Wavelength: | 540, 600 & 700 nm |
| Type of measurement: | Polychromatic endpoint |

9. CALCULATIONS

The instrument automatically calculates the concentration of Albumin in g/dL.

10. REPORTING RESULTS AND REPEAT CRITERIA

10.1 Interpretation of Data

None required

10.2 Rounding

No rounding is necessary. Instrument reports results up to one decimal point.

10.3 Units of Measure

g/dL

10.4 Clinically Reportable Range (CRR)

0.0 – 32.0 g/dL

10.5 Repeat Criteria and Resulting

All repeats must replicate the original result within the total allowable error (TEa) of the assay. Refer to TEa listing for specific information.

Values that fall within the AMR or CRR may be reported without repeat. Values that fall outside these ranges must be repeated.

| IF the result is ... | THEN... |
|----------------------|---|
| 0.0 g/dL | Assure there is sufficient sample devoid of bubbles, cellular debris, and/or fibrin clots. Report as: 0.0 g/dL |
| ≥ 8.0 g/dL | On Board Automated Dilution: Results ≥ 8.0 g/dL will automatically have repeat testing performed into the instrument using dilution factor of 4. No multiplication is necessary. |
| > 32.0 g/dL | If the recommended dilution does not give results within the clinically reportable range, report as: “> 32.0 g/dL-REP” Bring to the attention of your supervisor prior to releasing result. |

| Message | Code |
|-----------------------------|----------------------------|
| Verified by repeat analysis | Append –REP to the result. |

11. EXPECTED VALUES

11.1 Reference Ranges

| Age | Female | Male |
|------------------------------|----------------|----------------|
| Adult (>19 years): | 3.4 – 5.0 g/dL | 3.4 – 5.0 g/dL |
| Pediatric: | | |
| 10 – 19 years | 3.8 - 5.6 | 3.8 - 5.6 |
| 7 – 9 years | 3.8 - 5.6 | 3.8 - 5.6 |
| 4 – 6 years | 3.6 - 5.2 | 3.6 - 5.2 |
| 13 months – 3 years | 3.5 - 4.7 | 3.5 - 4.2 |
| 6 – 12 months | 2.3 - 4.7 | 2.2 - 4.7 |
| 91 – 180 days | 2.3 - 4.4 | 2.2 - 4.9 |
| 31 – 90 days | 2.0 - 4.2 | 2.1 - 4.8 |
| 8 – 30 days | 1.9 - 4.4 | 2.1 - 4.5 |
| 0 – 7 days | 1.9 - 4.0 | 2.4 - 3.9 |

Form revised 2/02/2007

11.2 Critical Values

None established

11.3 Priority 3 Limit(s)

None established

12. CLINICAL SIGNIFICANCE

Albumin is the protein of the highest concentration in plasma. Albumin is formed exclusively in the liver and serves as a transport and binding protein for calcium, fatty acids, bilirubin, hormones, vitamins, trace elements and drugs. It is also of prime importance in maintaining the colloidal osmotic pressure in both the vascular and extravascular spaces. Decreased serum albumin concentration can result from liver disease. It can also result from kidney disease, which allows albumin to escape into the urine. Decreased serum albumin may also be explained by malnutrition or a low protein diet.

13. PROCEDURE NOTES

- **FDA Status:** FDA Approved/cleared
- **Validated Test Modifications:** None

The instrument reporting system contains error messages to warn the operator of specific malfunctions. Any report slip containing such error messages should be held for follow-up. Refer to your Dimension Vista Operator's Guide.

The expected maximum observed standard deviations for repeatability using n = 5 replicates at the following albumin concentrations are:

| ALB Concentration | Acceptable S.D. Maximum |
|--------------------------|--------------------------------|
| 3.2 g/dL | 0.34 g/dL |
| 5.8 g/dL | 0.29 g/dL |

14. LIMITATIONS OF METHOD**14.1 Analytical Measurement Range (AMR)**

0.0 – 8.0 g/dL

14.2 Precision

| Material | Mean g/dL | Standard Deviation (%CV) | |
|-------------------|----------------------|---------------------------------|-------------------|
| | | Repeatability | Within-Lab |
| Multiquel Control | | | |
| Level 1 | 3.2 | 0.1 (2.5) | 0.1 (3.2) |
| Level 2 | 5.8 | 0.1 (1.2) | 0.2 (2.6) |

14.3 Interfering Substances

HIL Interference:

The ALB method was evaluated for interference according to CLSI/NCCLS EP7-A2. Bias, defined as the difference between the control sample (does not contain interferent) and the test sample (contains interferent), is shown in the table below. Bias exceeding 10% is considered “interference”.

| Substance tested | Substance Concentration | ALB g/dL | Bias % |
|--------------------------|-------------------------|----------|--------|
| Hemoglobin (hemolysate) | 1000 mg/dL | 3.9 | <10 |
| Bilirubin (unconjugated) | 60 mg/dL | 4.1 | <10 |
| Bilirubin (conjugated) | 60 mg/dL | 4.1 | <10 |
| Lipemia Intralipid® | 3000 mg/dL | 3.5 | <10 |

14.4 Clinical Sensitivity/Specificity/Predictive Values

Not available

15. SAFETY

The employee has direct responsibility to avoid injury and illness at work. Nearly all harmful exposures to infectious substances and chemicals, and other injuries, can be avoided with effective training and consistent safe work practices.

Become familiar with the Environmental Health and Safety (EHS) Manual to learn the requirements on working safely and protecting the environment from harm. Although lab work typically focuses on the hazards of working with specimens and chemicals, we must also control other important hazards.

- Slips, trips, and falls cause many serious injuries. Please ensure that spills are cleaned quickly (to avoid slippery floors) and that you can see and avoid obstacles in your path.
- Ergonomic injuries result from performing tasks with too much repetition, force, or awkward position. Ergonomic injuries include strains and back injuries. Learn about ergonomic hazards and how to prevent this type of injury.
- Scratches, lacerations, and needlesticks can result in serious health consequences. Attempt to find ways to eliminate your risk when working with sharp materials.

Report all accidents and injuries immediately to your supervisor or the business unit Environmental Health and Safety Manager or Specialist.
