TO Cone Health Oncologists

FROM: John Patrick, MD, FCAP, FASCP, Cone Health Greensboro/Reidsville
Hospital Laboratories Medical Director

DATE: 05/15/2020

SUBJECT: Flow Cytometry panel update for the aid in the differential diagnosis of
hematologic neoplasms

On May 26, 2020 the Cone Health Flow Cytometry Lab will begin utilizing the Beckman Coulter ClearLLab 10-Color Panels* for the in vitro diagnostic identification of hematologic cell populations. These panels will be performed on the Beckman Coulter Navios EX Flow Cytometer. The ClearLLab 10-Color Panels are used as an aid in the differential diagnosis of hematologic neoplasms.

This method will replace the 4-Color lymphoid and leukemia panels panels previously performed on the BD FACS Cantos II.

Ordering of flow cytometry in CHL will remain unchanged.

For questions, contact the Flow Cytometry Laboratory at 336-832-1459.

**The ClearLLab 10C system is an integrated FDA cleared and CE-marked IVD leukemia and lymphoma*(L&L) immunophenotyping solution for lymphoid and myeloid lineages.*
