

# Procedure Change/Revision (IMM 36-A)

**Procedure: Proficiency Testing in the Flow Cytometry Laboratory FLW-02**

**Change/Revision: New Procedure in how to handle and report Fetal Hgb**

1. Blood Bank staff will receive the CAP HBF survey and review the required testing information.
2. Blood Bank staff will test the samples.
3. The specimens and a copy of the CAP worksheet will be given to Flow Cytometry for testing.
4. The Flow Cytometry staff will return the samples and the completed worksheet with their results to the Blood Bank.
5. If necessary, the Blood Bank Resident, with assistance from the attending physician, will calculate the required dose of RHIG for one or both specimens.
6. The Blood Bank staff will review all the results/worksheets for completeness and accuracy.
7. The Blood Bank staff will submit the survey results electronically to CAP.
