### Edit Results Before Specimens Are Marked Gross Done

- Users entering or editing results for a case no longer needed to wait for grossing assistants to mark a specimen done before they edit case information in the Result Editor pane of the Outstanding List. They can see the in-progress Gross Description for specimens and edit other fields in the meantime.
- As before, specimens that no users have started grossing do not appear.

### New Specimen Numbering Scheme

Beaker can use placeholder specimens to reserve an ID when specimens arrive in the lab out of sequence so that the ID of the specimen collected in the OR and the ID of the specimen in Case Builder match more often. A specimen is considered a placeholder specimen until the point at which it is acknowledged as part of a case in Case Builder.

When a case has more than 26 specimens, **the ID sequence now goes from Z to AA, AB instead of AA, BB as it did previously** so that specimen IDs match the naming convention of OR specimens. This change means that when additional specimens are added to a case that already had some double-letter labeled specimens, the new specimens fill into the previous list alphabetically instead of being appended.

# More Info about the Web-Migrated Outstanding List – 1 of 2

- Critical
- This updated activity can search the database of tests to generate simple reports and includes a personal work list called Pinned to which users can add tests and cases they intend to work on.
- In the web-migrated Outstanding List, the upper list section is replaced with filter buttons users can click to see only overdue tests and cases. These filters appear by default and require no setup.
- You will need to click the arrow to see the STAT, Overdue and Resulted lists.

Dutst	an	ding List - V	VC LAB -	WC CHEMISTRY - 1 o	out	of	59

When a selected result is verified or otherwise removed from the Outstanding List, no new row in the list is selected and the user sees a message in the central result editing pane that they can select a row to get started. This behavior helps ensure that users are consciously selecting the next test or case they want to work on and are verifying details as needed.

# More Info about the Web-Migrated Outstanding List – 2 of 2

 You will still result your tests using the Result Editor. You will access Result Editor by scanning the Specimen ID, double-clicking the patient row or right-click the patient row and select Result Editor.

### Break the Glass to See Restricted Patients in the Lab Past Due Orders Report

 When you review past due orders that need to be collected, you might notice patient names now appear as "<Restricted>". When needed, click Collect Specimens or the Access patient information link in the Order Summary report to break the glass for the patient so you can see the Order Summary report and document collection. Click Refresh Selected for the selected row to update the patient name column.
