Blood Bank Results in Care Everywhere

1. Why do we need to do this? We need to find any patient ABO/Rh and antibody history we can find to make sure that we aren't missing something.

For instance, we had a patient with a history of Anti-K but the antibody screen was negative on the Vision. Since we weren't checking history in Care Everywhere at that time we missed the Anti-K and we gave him a Kell positive unit that caused a hemolytic transfusion reaction. The patient was ok but, Yikes!

We can't catch everything but this is another safety measure.

2. When do we need to do this?

- a. When we result a type and screen
- b. EVERY TIME WE SIGN OFF ON A CROSSMATCH.
- c. Why? Because data can be updated in Care Everywhere and data can also be missed by yourself and by others.

3. Please be thorough!

- a. Look up all lab results, not just the past 3 years.
- b. Look up results marked as Blood Bank, Transfusion Medicine, Other, Miscellaneous, Obstetric Panel, Immunohematology or anything else that could possibly be related to Blood Bank results.
- c. Please scan all Blood Bank results. Just because you found some results doesn't mean all the other Blood Bank results are the same.
- 4. **Don't forget to open up the results for CO-OB/GYN Affiliates of Denver.** You can usually find those results in the ambulatory summary. These results are usually NOT in the lab results tab.
- 5. If anybody else finds results in some other area please let the rest of us know!
