ATT00001.txt;

Hi everyone,

It seems that for the most part, the go-live for NW hospital blood bank testing went smoothly.

I have been notified that there were some issues trying to find some needed information about cord bloods and mom's testing results. The following should help guide you in finding this information.

1. In Sunquest click
2. Enter patient U #
3. In the Number of days (1-9999) box in the Restrictions-Days prior to last activity box, enter 3

Restrictions - Days prior to last activity

Enter the desired number of days up to and including the last day of activity.

Last activity was on 06/01/2020

Number of days (1-9999) ▲ 05/30/2020 (Saturday)
▼ 06/01/2020 (Monday)

4. In the test code box type RTSNW (Reference, Type and Screen, Northwest)
5. Click Add
6. Click Get results

This should give you the information for the mother's type and screens performed in the last 3 days. If you are unable to find the result, you can skip step 4 which will bring up all the tests performed in the last 3 days.

The techs at NW have been trained to assess the need for cord blood testing according to our policies. When a specimen is received (CORDBT or BBHOLD) write the information on the cord blood log from the requisition and from lab inquiry. Verify that the sample was ordered correctly from NW.

If you have any questions, please let your leads know.

Thanks,
Christy
