Did you know the status of a Blood Product can be easily viewed in EPIC?

This will provide a guide on how to view blood product status updates in EPIC.

Step	Action					
1	The easiest way to view blood product status updates is by accessing the Results Review Activity.					
	Click on Blood Bank Products under the Laboratory Results review tree.					
	The flowsheet rows will expand and present the various statuses for each particular unit ordered on the patient.					
Note						
A unit that has a status of allocated indicates that is has been tested and is available for nickup in the						

A unit that has a status of **<u>allocated</u>** indicates that is has been tested and is available for pickup in the bloodbank for patient transfusion.

Product Statuses and what they mean:

ALLOCATED = Unit has been cross-matched to the patient and is available for pickup.

ISSUED = The unit has been picked up from the Bloodbank. Lab product charges triggered.

ISSUED, FINAL = Status updated automatically at midnight by lab system post transfusion to signify final disposition of the unit required by regulatory standards.

REL FROM ALLOC = Released from allocation. Blood bank has been informed that unit is no longer needed on that patient so it is placed back into general availability

Step	Action
2	Another option to view blood product status updates is by going to the Sidebar Report.
	Click on the Blood Administration hyperlink.

3	When viewing the Blood Administration report you will see a header called "Blood Bank Results".				
	This portion of the report will present the various products that have been processed by the lab.				
	The information provided will include the unit number, blood component type, the unit status, transfusion status and crossmatch result.				
Note					
The red and blue boxes indicate all the items associated with one unit at a time.
