

Managing Chain of Identity and Chain of Custody across the CARVYKTI Order Fulfillment Process

New Features

September 29th Release Date

Introduction

We are pleased to let you know that Release 4.4 of the CQUENCE Chain of Identity/Chain of Custody platform will be going live on September 29, 2024. This release brings several new enhancements and features that are highlighted below.

Landing Page Updates

The latest 2000 active records will now be displayed on the landing page. If the search criteria returned greater than 2000 results the portal user will need to refine their criteria to return fewer results. Due to this update the user will no longer be able to search by Patient Name in the search text box. If needed, please search by COI, Order ID, Order Journey Stage or Lot Number.

Filtering options will now automatically be visible on the landing page. After selecting filters and/or entering in a search criteria field, select the “Search” button to display the results. To remove your search results and load the originally displayed records select the “Clear Search” button.

For users that have access to the Upcoming Orders Report, we have now introduced a “Report” drop down button with the option to select “Upcoming Orders” or “Infectious Disease Marker Testing”.

The screenshot displays the 'Search and Filter' interface. At the top, there is a search bar with a magnifying glass icon, a 'Search' button, and a 'Clear Search' button. Below the search bar, it says 'Search by COI, Order ID, Order Journey Stage or Lot Number'. There are two date filter fields: 'Filter by Date: Start Date' and 'End Date', each with a calendar icon. Below these are status filter buttons: 'Completed', 'In Process', 'Scheduled', 'Cancelled', and 'Paper-Based'. A 'Reports' dropdown menu is open, showing options for 'Infectious Disease Marker Tes...' and 'Upcoming Orders'. A blue information banner states: 'You are currently viewing most recent active orders [up to 2000 lines]'. Below this is a table with columns: COI, Patient Name, Order Journey..., Order ID, Lot Number, Annotate, Therapy/Prod..., and Status. The first row of data shows: CLC.NV5111, US Test, Collection Shipment, US-TRTRT005-intw3-00566, QW445T, Cilta-Cel, and In Process.

COI	Patient Name	Order Journey...	Order ID	Lot Number	Annotate	Therapy/Prod...	Status
CLC.NV5111	US Test	Collection Shipment	US-TRTRT005-intw3-00566	QW445T		Cilta-Cel	In Process

Collection Workflow Update

The Apheresis Operator role or Apheresis Operator/Local Cell Lab Operator dual role will have a “Time Zone” dropdown for the End of Collection time. The “Time Zone” field will be prepopulated based on the operator settings in the CQUENCE Chain of Identity/Chain of Custody solution.

Collection Data

Patient Weight (In kg)
64

Collection Date: Aug 5, 2024
End of collection Time (24 h): 12:00
Time Zone: (GMT-07:00) Pacific Daylight Time (America/Los_Angeles)

Scan or Enter DIN /SEC-DIS/ Apheresis ID
123456 123456

Validated on: 8/5/2024, 3:05:18 PM PDT
Number of Characters: 6

Autosave Functionality for Collection & Collection Shipment Workflows

If an Apheresis or Local Cell Lab operator hasn't completed the Collection or Collection Shipment workflow and is logged out of the portal due to system inactivity, the data filled out will be automatically saved.

Update to the Infusion Workflow

Batch/Lot Number is now included in the Product Information Section.
