

Objectives: Upon completion of this exercise, the operator will:

- Understand which chemistry tests are included in CBT Phase 1
- Understand the method details of each test in CBT Phase 1 so they may be performed properly
- Understand the basic clinical uses of each of the tests to ensure appropriate review, follow-up and release of results
- Understand LIS implications (HMA file and TSH reflexing) to ensure proper protocol is used

Reference Material:

- Power Point Education: Community Based Testing (CBT) Phase 1 Implementation at RRLs - Chemistry
- CHEM CBT related method and instrument procedures

Instructions:

- Review Community Based Testing Power Point and the documents referenced in that educational tool.
- Answer all the questions included in the exercise. Each question has one correct answer.
- Submit completed exercise to the site supervisor/designee.

DUE DATE: November 2, 2012
